

November 27, 2018

Dear Valued Customers,

The CDC and FDA have linked the Romaine *E. coli* Advisory to the growing regions of Northern and Central California. They have confirmed that it is **safe** to consume romaine and romaine products harvested in: the Imperial Coast, Florida, Mexico, Arizona, and greenhouses.

Keany Produce and Gourmet will begin the selling and distribution of these products from the approved regions by the FDA. Please anticipate supplies of all lettuce products to be limited until next week. We will do our best to fulfill every order as we receive shipments from growers.

- We have discarded the affected romaine and romaine products (i.e. spring mix)
- We will only distribute romaine from the approved regions listed above.
- We anticipate a normal supply flow of romaine within five to seven days.
- All spring mix/mesculin items are cleared and do not contain baby romaine.

We will continue to monitor this situation and update our valued customers with any additional details as they become available. Keany Produce and Gourmet appreciates the trust you place in us and will continue to do everything possible to offer the safest, highest quality products available.

Sincerely,

Ted Keany  
Vice President of Sales
